

## Gulf of Mexico Harmful Algal Bloom Bulletin

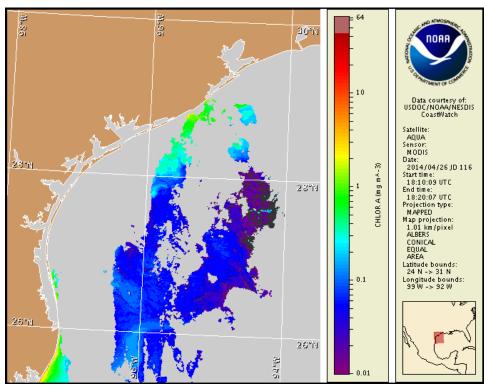

Region: Texas Monday, 28 April 2014

NOAA National Ocean Service

NOAA Satellite and Information Service

NOAA National Weather Service

Last bulletin: Monday, April 21, 2014

Satellite chlorophyll image with possible *K. brevis* HAB areas shown by red polygon(s), when applicable. Points represent cell concentration sampling data from April 18 to 24: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/habfs\_bulletin\_guide.pdf

Detailed sample information can be obtained through the Texas Parks and Wildlife Department at: http://www.tpwd.state.tx.us./landwater/water/environconcerns/hab/redtide/status.phtml

## **Conditions Report**

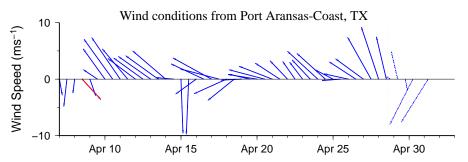

There is currently no indication of *Karenia brevis* (commonly known as Texas red tide) along the coast of Texas. No respiratory irritation is expected Monday, April 28 through Monday, May 5. Check <a href="http://tidesandcurrents.noaa.gov/hab/beach\_conditions.html">http://tidesandcurrents.noaa.gov/hab/beach\_conditions.html</a> for recent, local observations.

## Analysis

There is currently no indication of *Karenia brevis* along the coast of Texas. For information on area shellfish restrictions, contact the Texas Department of State Health Services.

MODIS Aqua imagery over the past several days (4/26, shown left) is completely obscured by clouds, preventing analysis at this time. Forecast models based on predicted near-surface currents indicate a potential maximum transport of 15 km south from the Port Aransas region from April 26 to May 1.

Derner, Davis

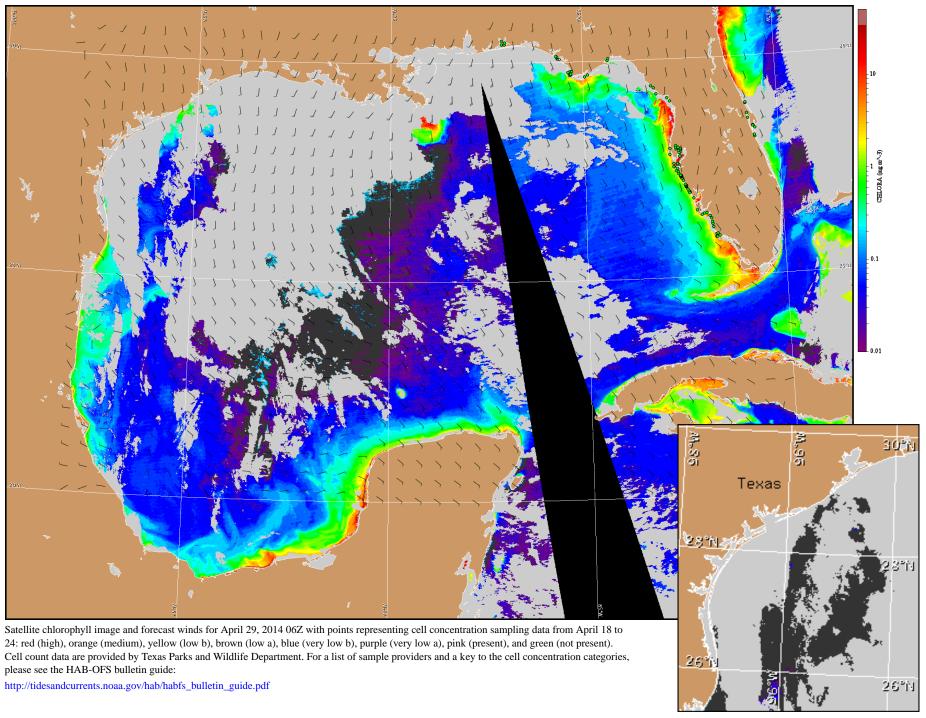

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

## Wind Analysis

**Port Aransas**: Southwest winds (15-20kn, 8-10m/s) today becoming south (5-10kn, 3-5m/s) from late morning into the afternoon. Southeast winds (5-10kn) tonight becoming south (10-15kn, 5-8m/s) after midnight. West winds (5-10kn) Tuesday shifting north Tuesday afternoon. Northeast winds (10-20kn, 5-10m/s) Tuesday night. North winds (15-20kn) Wednesday becoming northeast (10-20kn) Wednesday night through Thursday. East winds (10-15kn) Thursday night becoming northeast (5-10kn) late Thursday through Friday. East winds (10kn, 5m/s) Friday night.

To see previous bulletins and forecasts for other Harmful Algal Bloom Bulletin regions, visit the NOAA Harmful Algal Bloom Operational Forecast System bulletin archive: http://tidesandcurrents.noaa.gov/hab/bulletins.html

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
